CHOOSING YOUR
SNOW BLOWER

SINGLE-STAGE
Smaller jobs such as walkways and small paved driveways require a lighter, easy-to-store snow blower. Single-stage snow blowers are best for clearing light to moderate snowfall from small paved area.

TWO-STAGE
Larger paved or gravel areas require a blower that can handle both surfaces with ease. Two-stage snow blowers are for jobs that need more power, work over both pavement and gravel, and can clear moderate to heavy snowfall.

GAS OR ELECTRIC

For areas where winter weather is moderate to extreme, two-stage and heavy duty two-stage gas snow blowers are a great fit for you. These machines will get you through the harshest winter conditions.

If winters where you live are mild and snow falls lightly, a single-stage or electric snow blower is ideal for you. These snow blowers can be gas, corded or battery powered.

*Conditions will apply. Product may vary as shown. See operator's manual or visit briggsandstratton.com for complete warranty details.
